

## SUPPORT

The 'Support' section of TPTracker gives you multiple tools to record, evaluate and report on your programmes of personal support or community regeneration.

## TRACK SUPPORT PROGRAMMES

TPTracker enables you to track and evaluate the individual intervention journey for each client: their status, engagement history, feedback, outcomes and personal impact, together with any relevant background and documentation.

You can easily create a file for each 'Programme' or Project and link it to a theme such as digital inclusion, work and skills or Financial inclusion. Within each programme file, you're then able to build up your records of client engagements, client expenses, other costs, staff time and contributions from partner organisations.

Client profiles will then have all of the data relating to their individual support programme.

## EVALUATE SUPPORT GIVEN

With TPTracker you're able to track changes in client status and set up star charts to evaluate the impact of interventions over the course of a programme. The support module will automatically calculate the movement of your criteria as a measure of the personal impact of their involvement. Set up questionnaires to collect and collate qualitative and quantitative feedback from clients, linked to each programme for continuous monitoring and improvement.

## MEASURING OUTCOMES

TPTracker can collate the scores and movements of star charts for all the clients of a programme to give you an aggregate summary of programme support success. By linking these star charts to social values, TPTracker will automatically calculate the social benefit created by a programme for each individual client and for all the clients collectively.

## WHY CHOOSE TPTRACKER?

- Track personal intervention journeys
- Evaluate programme impacts and outcomes
- Collate support programme outcomes and calculate social benefits
